PEE DEE ELECTRIC COOPERATIVE

**COMMUNITY
SOLAR**

Make a Difference.
ENROLL TODAY.

Your co-op is leading the way to renewable energy.

Pee Dee Electric is always looking for ways to deliver innovative solutions to our members. That's why we're joining South Carolina's 20 electric cooperatives in building the largest network of community solar installations across our state. It's a significant investment, but one we know will make a difference long into the future.

Although solar power is more costly to produce and variable because it's weather dependent, the environmental benefits are valuable.

SOLAR POWER:

- » reduces air and water pollution and greenhouse gases.
- » reduces our dependence on fossil fuels like coal and natural gas.
- » is a renewable, abundant source of power.

We've built a 250kW solar farm right beside our headquarters in Darlington, allowing our members to share in the clean energy it produces without the burden of residential solar panels at home. Members may volunteer to participate at a rate of \$2.50 per month added to your monthly Pee Dee Electric bill and may cancel at any time.

Sign up for Pee Dee Electric's Community Solar program today.

Please complete form and return with your power bill payment.

- I would like to learn more about Community Solar. Please contact me.
- I would like to volunteer to participate in Community Solar at \$2.50 per month. The program is completely voluntary, and I may cancel at any time with no penalty.
